

Pi vs Hermes vs Codex: Context Compaction and Memory

I • DROP OLDEST

II • ROLLING SUMMARY

III • TIERED MEMORY

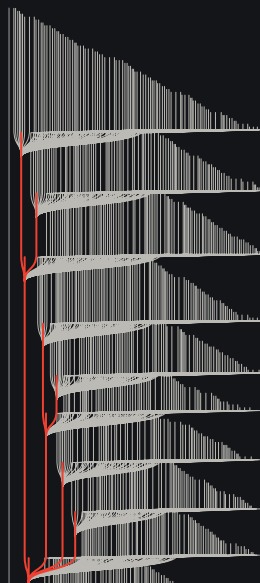

FIG. 0 One simulated 200-turn agent session (464 messages) replayed under three compaction policies. Each line is one message's place in the context window, time running down; where lines converge, the window was compacted (146, 7 and 9 times). Summaries in red.
