

Pi vs Hermes vs Codex: Context Compaction and Memory

A • DROP OLDEST

B • ROLLING SUMMARY

C • TIERED MEMORY

FIG. 0 One simulated 200-turn agent session replayed under three textbook compaction policies, A-C — not the three agents' own implementations. Each line is every third message's place in the window, time running down; lines converge where it was compacted (146, 7, 9 times). Summaries in red.
