

5D Parallelism for Large Model Training

BLAZON

Chequy of thirty-two Or and Sable, parted per pale for data, per pale indented for tensor, per fess embattled for pipeline, per fess wavy for context and per fess dovetailed for expert.

SYMBOLISM

The smallest five-dimensional mesh: two ways along each axis, thirty-two GPUs, one square each. Every kind of split has its own line, so you can read which axis divides any two neighbours.
