

```

user: the build fails on the parser
branch, can you take a look?
assistant: running the tests first.
tool: pytest -q: 3 failed, 41
passed. assistant: the lexer returns
bytes where the parser expects
str; patching lexer.py and running
again. tool: 44 passed. user:
great, now make it stream the
file instead of loading all of
it into memory. assistant:
switching read() iterator over
chunks, small carry buffer
tokens split across chunk
boundaries. tool: 46 passed,
peak memory 38 MB, down 1.2
GB. user: add test token
split exactly boundary.
assistant: added
test_split_token chunk
sizes 1, 2 7. tool: 47
passed. user: commit

user: add retries to the payment
webhook handler, it drops events when
the ledger is slow. assistant: reading
handler.py and the queue config. tool:
grep retry: no matches. assistant:
adding exponential backoff with
jitter, at most five attempts, and
an idempotency key so a retried
event is never applied twice. tool:
12 passed. user: what happens after
the fifth failure? assistant: the
event goes dead letter queue last
error attached, alert fires. user:
replays? assistant: replay command
reads dead letter queue order
reuses same idempotency keys.
tool: 15 passed. user: ship
behind flag. user: add retries
payment webhook handler, drops
events ledger slow. assistant:
reading handler.py queue
config. tool: grep retry: no

user: the nightly ingest job got slow
after yesterday's merge, can you
profile it? assistant: running it
with the profiler on a one
percent sample. tool: 71
percent of time in
normalize_rows. assistant:
the merge replaced a
vectorised call with a
python loop over every
row. restoring the
vectorised path adding
benchmark cannot regress
silently. tool: sample
run 4.1 s, 58 s. user:
why did review miss
assistant: diff large
loop looked
equivalent;
benchmark fails
build if sample
run exceeds 8 s.
